

Naturally Restylane

With the *Restylane*® line of products, your practitioner can customise the perfect treatment plan to enhance your natural elegance.

Restylane
Natural Elegance

Authentic, natural, confident

As we age, our skin loses fat, collagen, and other important elements that provide facial volume and support. We also start to see the formation of lines, wrinkles, and folds that can contribute to us looking older.

With the *Restylane*® line of products, your specialist can create a personalised treatment plan to help address the signs of aging. As one of the world's leading hyaluronic acid fillers, *Restylane* is specifically designed to restore facial volume as well as enhance shape and contour. Results are instant, with an effect that can last up to 18 months, depending on the treatment area.^{1,2}

Delivering safe and reliable outcomes for more than 20 years, *Restylane* provides treatment solutions for elegant and natural looking results.

Creating satisfying results for years...

“ I have always wanted to look natural. I don't wear much makeup, and it has been important to me to maintain that look over the years. That is how I started to use *Restylane*—I cannot believe it's been 20 years already! ”

Louise, a Swedish 65-year-old, was one of the very first patients to be treated with *Restylane* in 1996. Louise has been continuously treated with *Restylane* over the past 20 years. She will continue to use the product to help her keep her natural look as she gracefully ages.

Restylane®

Before & After

Before

After

Cheeks: Loss of fat can lead to a reduction of volume in the cheeks, giving a sunken appearance.

Before

After

Nose/Mouth Fold: Over time, the skin of our cheeks may drape or sag over the line between the nose and mouth (nasolabial line) to become a fold, which creates a tired look to the face.

Before

After

Lips: Our lips lose definition and fullness over time - treatment can help enhance and balance this area.

Thin to Full

Before

After

Tired Eyes: Ageing can lead to volume loss in the lower eyelid, accentuating tear troughs and giving the appearance of dark circles under the eyes.

Restylane®

What is Restylane®?

Restylane is a range of products for facial aesthetic treatments to efficiently reduce lines, folds and wrinkles, create fuller lips, enhance contours and adds volume, as well as improve skin quality, structure and elasticity. The Restylane range is designed to complement the varying stages of facial ageing to provide natural-looking results.

What is hyaluronic acid?

Hyaluronic acid is a sugar molecule that exists naturally in many organisms. It absorbs water and is also important for the transport of nutrients, regulating water balance and giving volume and structure to the skin.

What areas can be treated?

The most common areas treated are:

1. Nose to mouth lines (the nasolabial folds)
2. Lip enhancement (adding volume and shape)
3. Cheeks, chin and jawline (shaping and contouring)
3. Back of the hands, décolletage, face, neck and imperfections such as acne scars (deep skin rehydration)

Discuss your treatment needs at a consultation with your trained Restylane practitioner. For more information on which areas can be treated with Restylane visit our treatments area to discover more.

How does Restylane work?

By boosting the skin's supply of hyaluronic acid, Restylane restores and adds volume to the skin and replaces loss of fat, instantly diminishing the appearance of lines and wrinkles, and giving a natural softer look. Restylane is an injectable gel consisting of stabilised (minimally modified), non-animal hyaluronic acid. The gel is tissue-friendly and closely resembles the hyaluronic acid that exists naturally in the body. It is long-lasting but not permanent.

What does a Restylane treatment involve?

Following a consultation to discuss your treatment expectations your practitioner will recommend which Restylane treatment is most suitable for you. Treatment normally takes around 15-40 minutes dependent on treatment area(s). Restylane fillers are injected below the skin in small amounts using a very fine needle or cannula providing benefits that can normally be seen instantly. The gel provides natural volume to smooth away the appearance of lines and wrinkles, enhance facial shape, or create fuller lips. You can expect slight redness, swelling, pain, tenderness, itching and/or bruising following a treatment. This is the same as you might expect with any type of injection.

How long does a Restylane treatment last?

One of the great advantages of Restylane is that the effects are long lasting but not permanent. Duration depends on many factors, such as the individual's skin type, skin condition lifestyle and age, and also the area treated. After the initial treatment, follow-up sessions are normally recommended around every 9 to 18 months depending on the individual and the area treated.

Consult your practitioner for further information based on your individual needs.

What should I avoid after treatment?

After the treatment, you should avoid exposing the treated area to heat (sunbathing, saunas, steam baths, etc.) or extreme cold until any signs of local inflammation have disappeared.

Achieve a confident, naturally elegant look with *Restylane*®

Restylane® fillers can help your practitioner customise a treatment plan to create the look that is right for you.

- Restoring a healthy youthful appearance by filling lines, wrinkles or adding volume.
- Enhancing facial balance and harmony by providing shape and contours.
- Immediate, natural looking results.

As for all injection treatments using hyaluronic acid dermal fillers, side effects may occur in association with treatment. These side effects are usually mild to moderate, and include transient reactions such as redness, pain, swelling, bruising and/or bumps at the injection sites. Please consult your clinician for additional information.
